Please Read Before Ordering

ORDERS. All orders are accepted by the Elliott Nursery Com-

pany subject to the following terms and conditions:

TERMS OF PAYMENT. Our terms of payment are invariably cash on delivery. This does not mean that we ship C. O. D., as we will not do so under any circumstances. We deliver the goods and mail bills at the same time, and expect payment within a few days. People unknown to us will please send cash or reference with their order.

PRICES AND PACKING. Prices in this catalog are made subject to stock offered being unsold when ordered, and include all charges for packing trees, shrubs, plants, and bulbs.

Six plants of a kind will be furnished at the dozen rate; 50 or more at the 100 rate; 500 or more at the 1,000 rate. Less than 6 plants of one kind or variety will be sold only at the single rate.

All prices f. o. b. shipping point.

FORWARDING. Shipments will be forwarded exactly as directed, but when without instructions we will use our best judgment and will forward by shortest and safest route. We recommend that all Herbaceous Plants be shipped by express.

RISK. All goods are at the customer's risk after they are delivered to the forwarding company and we receive their receipt for the shipment in good condition.

CLAIMS FOR DAMAGES WHILE IN TRANSIT must be made to the delivery company. Have the delivery agent note the damaged condition on the freight bill and promptly present your claims to the transportation company. Send us copy of all papers so we can help secure prompt

PARCEL POST. Small shipments can be sent by parcel post. All such shipments will be sent insured, insurance and postage to be paid by the customer.

SHIPPING DIRECTIONS. Please give exact shipping directions, stating whether the stock is to be shipped by freight or express, and by what route. Early orders for trees and bulbs can be shipped by freight.

INSPECTION AND FUMIGATION. Our stock is regularly inspected, and certificates will be sent with each shipment. Stock will be fumigated when requested or when the state laws require it.

IMPORT ORDERS are taken subject to failure of crops and to restrictions of quarantines promulgated by the Federal Horticultural Board.

NO AGENTS EMPLOYED. From time to time it has been reported to us that people have represented themselves as our agents in various parts of the country. We employ no agents whatever, but do an exclusive retail business direct with our customers.

GUARANTEE. We guarantee all nursery stock furnished by us to be first class, true to name. We do not guarantee the stock to grow, neither do we guarantee the result in any way. No complaint will be entertained that is not made immediately upon receipt of stock. There are so many causes for failure, over which we have no control, that we can assume no responsibility after the stock is delivered in good order to the transportation company. Poor soil, changeable weather. ignorant or careless culture—all contribute to failure. A catalog as comprehensive as this must of necessity offer some varieties of difficult culture; when these are ordered we presume the people ordering have the knowledge needed for that culture. Successful gardening requires knowledge, enthusiasm, and perseverence, and these we cannot supply.

PLEASE PRINT YOUR NAME AND ADDRESS on your order. Many times it is extremely difficult to read these two important parts of an order, and the shipment may go astray.

Some Notable Hardy Plants

Anchusa Italica, Dropmore
One of the most important hardy plants of recent introduction, and a grand improvement on the original type of A. Italica, or Italian Alkanet, and a plant which, on account of its remarkable freedom of flowering and its beautiful blue color, is sure to become one of our most popular hardy perennials. It attains a height of 5 to 6 feet, and produces its pretty blue flowers, which are from 1 to 11/4 inches in diameter, throughout the entire Summer. \$2.50 per 12; \$15.00 per 100.

Arabis Alpina flora plena

(Double Alpine Rockcress)
Forms a dense carpet, completely covered with double white flowers in early Spring. Fine for rockwork and edging. \$2.50 per 12; \$15.00 per 100.

Aubrietia Deltoides Purpurea

(Purple Lady Aubrietia)

An evergreen trailing plant with silvery foliage. Many lovely purplish flowers in Spring and early Summer. \$2.50 per 12; \$15.00 per 100.

Campanula Rhomboides fl. pl.

(Diamond Bellflower)

Trailing plant of proven merit. Double light blue flowers in profusion. Excellent for the rock garden or edging the perennial border. \$2.50 per 12; \$15.00 per 100.

Climbing Hydrangea

We have at last succeeded in getting a stock of the rare Schizophragma
Hydrangeoides, known as the Climbing Hydrangea. It is one of the rarest
and most beautiful vines, having flowers similar to Hydrangea Hortensis.
Fine strong, pot-grown plants, \$1.00 each; \$10.00 per 12.

Canterbury Bells

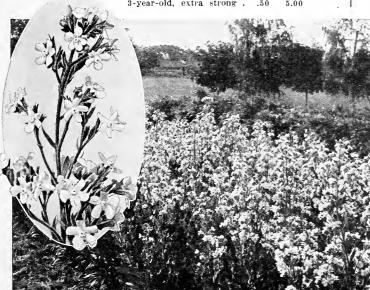

(Campanula Medium)
One of the showiest and prettiest of garden plants. It is a biennial and ordinarily dies after blooming. Plants should be set in early Spring. Pink, white and blue, \$2.50 per 12; \$18.00 per 100.

Clematis Paniculata

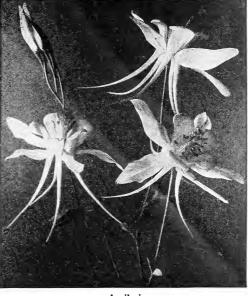

This handsome hardy climber is one of the choicest and most satisfactory climbing flowering plants we know. The plant is of strong, rapid growth, with small, dense, cheerful green foliage, giving it a grace and elegance possessed by no other hardy climber, and, even did it not flower at all, it would be one of the most desirable vines. The flowers appear in the greatest profusion during August and continue until late in the Fall, are of white color and most deliciously fragrant. The plant succeeds in almost any position; not only is it well adapted to run up all kinds of supports, but it is tion; not only is it well adapted to run up an amous of supports, see ... just as useful for planting among rockwork, sloping banks, or, in fact, in any nosition where a graceful vine is desired.

Anchusa Italica.

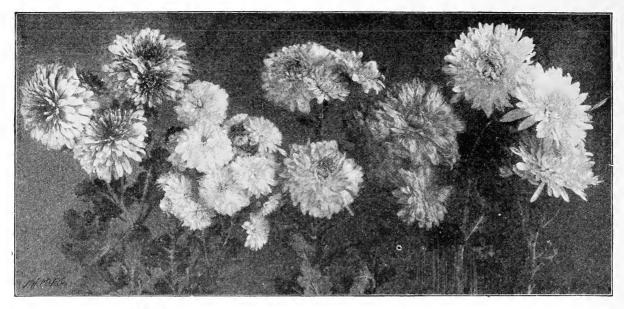

Aquilegia.

Aquilegia

All of the single, long-spurred Aquilegias, or Columbines, are extremely beautiful, and a collection of them should be a feature in every garden. Foremost among these choice plants are our native Aquilegias. If these and other choice hardy plants were as well known as bedding plants, the day of geraniums, coleus, and other commonplace plants would soon be over. The flowers of these Aquilegias are most lovely and delicate, ranging from white to crimson, including shades of blue and The exquisite Rocky Mountain Columbine,

Aquilegia cœrulea, is one of the loveliest flowers in cultivation, and it and Aquilegia canadensis, which grows wild so plentifully in many localities, are both fine for naturalizing and will thrive if planted in the grass of meadows and allowed to take care of themselves. They are also fine for

Old-fashioned Chrysanthemums

These have come to be regarded as the typical flowers for Autumn, although this popularity has come to them during the past ten to fifteen years. No other class of plants gives such a wide range of color—white, yellow, bronze, scarlet, crimson, and deep dull red, with many intermediate softer tones. In masses they are particularly effective, while scattered clumps enliven the whole garden. Early Spring planting is desirable. When the plants have grown a few inches, pinch off the tips and repeat this in late July. This tends to give larger and better formed blooms.

Pompon Varieties

Perfectly hardy; require little, if any, protection during the Winter, unless in exposed situations. Golden yellow blooms, little more than 1/2 inch across. Late\$2.00 ob. Pale pink, center lighter; good cutting va-\$13.00 riety 2.00 13 00 Delphine Dodge. Rose-pink when the flowers first open, but changing to a lighter shade as the bloom matures. Tall English **Delphiniums**

We are tempted to say that the Improved English Delphiniums are the most beautiful hardy plants in cultivation, but we are also tempted to say this of a score of other things, and, of course, it is impossible to say which is the most beautiful of hardy plants, for they have such an immense variety of beauty that the wonder grows that people continue to plant, by the million, bedding plants which have little or no beauty, are an annual expense, and cost quite as much as hardy plants whose first cost is their only cost and which increase in size, in beauty, and often in quantity, year after These Delphiniums may not be the most beautiful hardy plants, but they are among the most beautiful, and nothing can be more distinct and satisfactory. They are stately and picturesque, some varieties growing 8 feet high in rich soil; they have immense spikes of most beautiful flowers of every imaginable shade of blue, and their season is a long

Culture of Delphiniums.

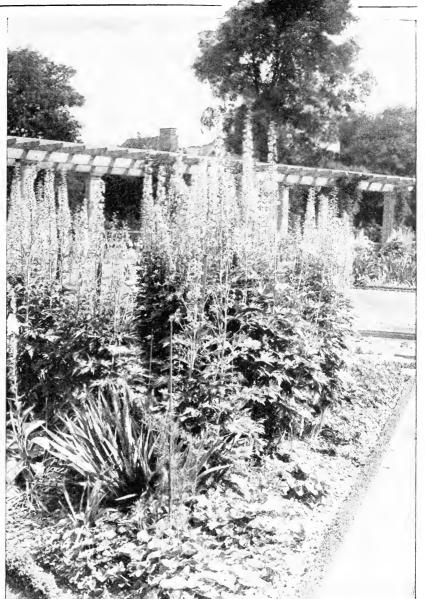

The culture of Delphiniums is exceedingly simple, and the results out of all proportion to the slight amount of care necessary. They thrive in almost any position, and may be planted at any time of the year, provided that in Summer the plants are not too forward, and that they be well watczed if the weather be dry. The soil may be a rich, friable loam, which suits them finely; but any soil, even hot and sandy. if well watered and manured, will give excellent results. Dig deeply—trenching is better—add plenty of well-rotted manure, and plant about 2½ feet apart. Placed in lines, as a background to a border, or in groups of, say, three plants at intervals, the effect of the Delphinium is exceedingly fine. look well in beds, also, arranged at the same distance apart each way. They are grand grown in masses of large groups of separate colors, and may be associated with shrubs with great advantage, succeeding well in shrubberies because of their robustness. A succession of flowers may be expected from Spring to early Autumn, especially if the spikes which have done flowering early be cut down to the ground; fresh growth will then be produced which will give blossom. Copious watering in Summer will be attended by increased size of spike and flower; in fact, in

seasons of prolonged drought, water is absolutely a necessity on many soils if the varieties are to exhibit themselves in their true size and beauty of flower and spike. Top-dressing is greatly recommended on certain soils, instead of the bare surface of the ground being left exposed to the sun. Some of the neater dwarf alpine and other hardy plants may be utilized to plant between and around Delphiniums. As we have intimated, any garden soil suits the Delphiniums; it is, however, necessary to secure sorts such as are offered below in order to obtain an effect superior to that afforded by the old smaller-flowered varieties.

Special Offer Improved English Delphiniums

I want everyone who receives this list to try these improved English Delphiniums, and to that end offer them at extremely low prices. I guarantee that they will give unqualified satisfaction in every instance and will be a revelation of beauty to most people. Fine Mixed English, grown from seed of famous 12 100 \$15.00

23.00 Extra-selected Varieties50c each

Delphinium-Larkspur.

Standard Sorts

Belladonna. The freest and most continuous blooming of all, never being out of flower from the end of June until cut down by hard frost. The clear turquoise-blue of its flowers is not equaled for delicacy and beauty by any other flower. 25c each: \$2.50 per 12; \$15.00 per 100.

Bellamosa (Improved Formosum). A dark blue of the type of Belladonna with the color of the old Formosum variety, but not liable to mildew like the latter and of stronger growth. \$2.50 per 12; \$15.00 per 100.

Grandiflora Chinense. A very pretty variety, with fine, feathery foliage and intense gentian-blue flowers in open panicles. \$2.00 per 12; \$12.00 per 100.

Chinense album (Slender Larkspur). A pure white form of the above. \$2.00 per 12; \$12.00 per 100.

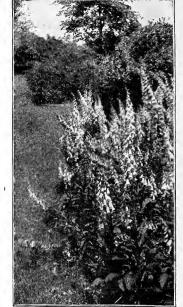

Dianthus Barbatus-Sweet William.

Dianthus Barbatus - Sweet William

That old-fashioned favorite, the Sweet William, has almost disappeared from our gardens; more's the pity, for its place has been taken by plants of far less beauty. The Sweet William is a fine did plant which produces great masses of bloom of extremely rich and varied colors. The flowers are very lasting and fine for cutting. The plants offered are grown from the finest strains to be obtained in England. We offer them in Pink, White, Crimson. Scarlet or Mixed Colors. Fine, large plants.

Forelows Digitalia

Foxglove - Digitalis

In England the Foxglove grows wild, but, notwithstanding this, it is a great garden favorite, as it well deserves to be. For stately and picturesque beauty it is not to be surpassed and, planted in masses in the garden among shrubs or naturalized on the edge of woods, in the orchard or along brooks, it is extremely effective and satisfactory. Strictly speaking, it is a biennial, but, as it renews itself from self-sown seed, it may be treated as a perennial. Mr.

Gaillardia.

Falconer has naturalized thousands of Foxgloves in Schenley Park, and nothing he has planted attracts more attention and admiration. Planted in the Fall, Foxgloves will bloom well the following season. We offer a fine lot of strong plants, grown from the best strains obtainable in Europe.

Purpurea gloxiniæflora. The white

Improved Gaillardias

We consider the Gaillardia one of the most beautiful and desirable hardy plants in cultivation, and believe our strain of these brilliant-flowered plants to be the finest extant. We offer these plants for less than they have ever been sold for, either in this country or Europe. Though such an ornamental addition to the herbaceous border, the perennial Gaillardia is content with extremely simple treatment. Dig the soil deeply and enrich with well-rotted manure. We recommend the Gaillardia for bedding purposes as well as for borders. Give a moderate amount of room and peg down, and a grand effect is to be Everyone will have noticed how grandly Gaillardias have obtained. thriven through the recent drought; they seem hardly to need water, but we recommend watering liberally to insure the finest flowers. The Gaillardia which Kelway & Son have been so successful in improving and popularizing is, of course, simply invaluable as a cut-flower, on account of its being so lasting when gathered and so brilliant and beautiful. gay biossoms are obtainable in perpetual profusion from June to November, and the greater the drought and scarcity of other flowers the more the utility of the perennial Gaillardia is demonstrated. No more brilliant and beautiful sight can be imagined than a large bed of Gaillardias, with their profusion of highly colored flowers of all shades. varieties of this improved strain measure fully 5 inches in diameter. Mr. Robinson, in the English Flower Garden recommends that they should be planted in bold groups, and remarks that no plants have finer effect in a bed by themselves, and we quite agree with him. Extra strong, fine plants, in a splendid assortment of colors, which will be sure to give complete satisfaction. \$2.50 per 12; \$15.00 per 100.

Hardy Garden Pinks

These Pinks are very hardy, and bloom with wonderful freedom in May and June The flowers are greatly varied in cclor and marking and are deliciously fragrant. They should be included in every garden. Care must be taken not to cover the foliage with manure or other mulching, in the Fall, as it will cause them to rot.

Dianthus plumarius (Grass Pink). A charming single Pink, with fringed petals. Flowers all of light colors, but greatly varied in markings. Mixed colors, \$2.00 per 12; \$12.00 per 100.

Dianthus plumarius semperflorens (Perpetual Pink). Similar to the above, but darker colors in a great variety of shades and markings; charming. Mixed colors, \$2.00 per 12; \$12.00 per 100.

Her Majesty. A fine hardy white pink. \$2.50 per 12; \$15.00 per 100.

Lily-of-the-Valley

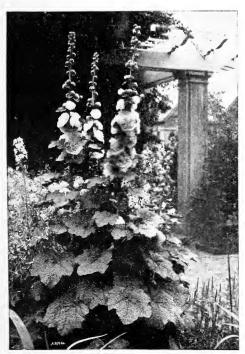

American pips. For outdoor planting only. \$1.00 per 25; \$3.50 per 100; \$30.00 per 1000.

Large clumps. 50c each; \$5.00 per 12.

Lychnis Viscaria Splendens flore pleno

(Double Rose-pink Campion)

Double Red (Ragged Robin). Forms a dense tuft of evergreen foliage, and in June it sends up tall spikes of handsome double, deep red flowers of exquisite fragrance, and remains in perfection six weeks. 25c each; \$2.50 per 12; \$15.00 per 100.

Hollyhocks.

Miscanthus.

Ornamental Grass, Miscanthus

The Miscanthus are hardy grasses that are splendid for planting against a porch or for groups in the shrubbery. They grow four to five feet high, have beautiful, graceful foliage, green or variegated, and in the Fall it is surmounted with numerous graceful feathery plumes, creamy white in color. These are desirable for cutting for Winter decoration, as they are everlasting. The plants are absolutely hardy and of the easiest culture.

Sinensis (Eulalia). Panicles are formed late in the season, on stems 4 to 9 ft. tall. \$2.00 per 12; \$13.00 per 100.

Sinensis gracillimus (Maidenhair Grass). Similar to the preceding, but with much more graceful leaves. \$2.00 per 12; \$13.00 per 100.

Sinensis variegatus (Striped Eulalia). Green leaves marked with white stripes. \$2.00 per 12; \$13.00 per 100.

Sinensis zebrina (Zebra Grass). \$2.00 per 12.

Hollyhocks

Have you ever noticed that painters choose single Hollyhocks as subjects for floral paintings oftener than any other flower? We suppose the reason for this is that artists have a keener appreciation of beauty than other people, and recognize that the common, and we fear sometimes despised, single Hollyhock, is one of the most stately, picturesque and beautiful plants in the world. Nothing can be more effective than a large group or mass of single Hollyhocks, and once planted they will literally take care of themselves, even if planted in the grass. We know of patches that have not been cultivated or disturbed in any way for twenty years. We are determined to have single Hollyhocks for our landscape gardening work, so we collected seed from old-fashioned (they will soon be new-fashioned) gardens and had thousands of plants grown for our customers. Some people think double Hollyhocks are more beautiful than single. They are mistaken, although the doubles are beautiful, but inclined to be top-heavy, often need staking and are liable to disease. Hollyhocks planted in the Fall will bloom well the following Summer.

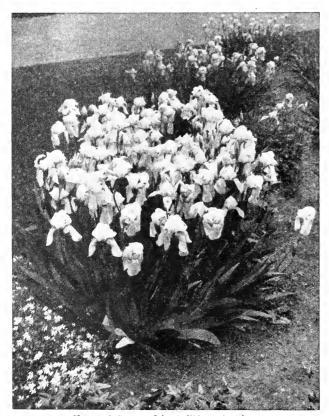

Best Large-flowered. Single, all colors, mixed		100 \$13.00 15.00
Chater's Famous Strain. Best double grown. In separate colors.	2.00	13.00
New Allegheny. Immense semi-double flowers, with fringed edges; very beautiful	2.50	15.00

Our Hollyhocks are free from disease, and to insure this we are having them grown in Ohio in soil which is entirely free from the Hollyhock disease.

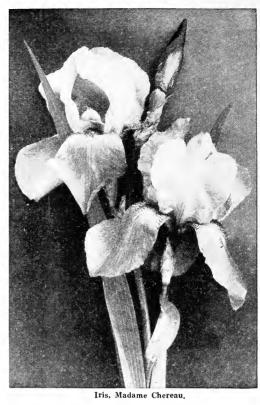

German Iris

Probably the Japanese Iris rank first in beauty, but they cannot approach in popularity the German Iris. A great number of new varieties have been introduced in the last decade and many of them are far superior to the older sorts in beauty and size of flowers. Some of these recent introductions, however, are extremely delicate, and refuse to bloom except when conditions are "just so." These have been carefully eliminated from our list. The German Irises in our collection may be raised with success by anyone. Give them a good sunny situation and plant the tubers so that they are only about half buried. In the descriptions which follow, the upright petals are referred to as "Standards," while those which droop are known as "Falls."

Japanese Iris

Although Japanese Irises have been grown in this country for forty to fifty years, they have never attained the popularity of the German type. One reason for this is that they have been a little more expensive, and certainly an additional reason is that their beauty has never been adequately shown nor fully appreciated. Without doubt, the Japanese Irises are the most gorgeous of all the perennials.

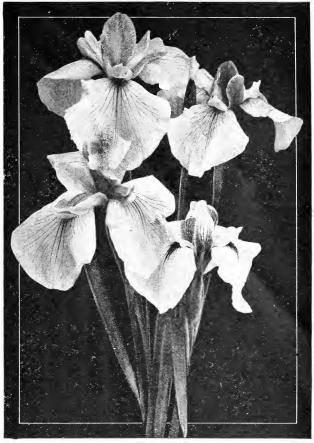

The Irises of this class have no standards; the petals are borne at right angles to the stalk and droop most attractively at the tips of the petals. They will grow in any ordinary garden soil, but amply repay efforts to suit their dispositions. Extra-good soil, and daily watering for a month before and during the blooming season will produce truly remarkable blooms. Some of them bave been known to attain a diameter of 12 inches. Be sure to make your Iris bed in as sunny a spot as possible.

Our original importation of Japanese Irises has been added to each year, as new sorts have originated. We think that our present collection contains the finest and most beautiful varieties in the world. As most of the original Japanese names are impossible to remember and even more impossible to pronounce, we have renamed many of the varieties in our list.

Siberian Iris

Narrow, grassy foliage and tall, flat stems make the Irises of this class the most delicate and ornamental of the whole family. They are especially desirable for borders, or for marking lines, etc., their slender graceful foliage and delicately poised blossoms holding a distinctive beauty that is peculiar to them. They are very persistent and will thrive even in blue-grass sod. Coming into bloom just at the close of the bearded Iris season, they flower quite freely and are extensively used for naturalizing and water-side plantings.

Siberian Iris, Perry's Blue

A new Siberian Iris with extra large, clear blue flowers on long stiff stems. A vigorous grower and free flowering. Excellent for cut flowers. \$1.25 each.

Liatris Pycnostacha.

Liatris Pycnostachya

(Cattail Gay Feather)

The popular name of this striking plant is Kansas Gay Feather. Nothing can be planted that will attract more attention on account of a very unusual appearance, but it is very beautiful as well as odd. It blooms in midsummer and throws up long, narrow spikes of rich purple flowers which last a long time. A peculiarity of this plant is its great attraction for butterflies; when in bloom it is always surrounded with them. 25c each; \$2.50 per 12; \$15.00 per 100.

Oriental Poppies I remember very well the first time I saw an

Oriental Poppy. I was a boy then, and it excited me wonderfully, and I thought it the most re-markable flower in the world; and now, after fifty years have gone by and I have seen almost all the known flowers of the world, I am still of the opinion that it is mighty fine, striking and effective, and I have taken the trouble to gather and have grown a collection of several varieties. The foliage of Oriental Poppies dies away in the Summer, and many think they are dead, but they will

ed, prove the most persistent eacteata. Red flowers of enormous size. **\$2.50** ner Bracteata. \$2.50 per 12; \$15.00 per 100.

perennial.

start into growth again in the Fall. They are rather hard to establish, but once establish-

Cerise Beauty. Extra large blooms; cerise-pink, with crimson center and black blotch at base of petals. \$2.50 per 12; \$15.00 per 100.

Mrs. Perry. Orange-apricot -distinct and unusual color. \$2.50 per 12; \$15.00 per 100.

Hardy English Primrose

(Primula Vulgaris)

One of the loveliest sights in all England are the hardy primroses in bloom in orchard and meadows in early Spring. In many cases the ground is carpeted with their lovely canary-vellow flowers which are delightfully fragrant. equally hardy here, and nothing can be more delightful, either for naturalizing in orchard, meadow, along a brook or planting in borders or along the edge of a shrubbery border. \$2.50 per 12; \$15.00 per 100.

Polyanthus or Cowslip,

Oriental Poppies.

Polyanthus or Cowslip

(Primula Veris)

This charming Spring-blooming plant belongs to the Primrose family, the hardy varieties of which are so very popular in England, but are rarely seen in this country, owing partly to an impression that they cannot be grown in this clumate. This is a mistake, as they do very well here. For the feart of the headers and of the leaders. here. For the front of the borders and shrubbery, for Spring bedding, and for naturalizing in moist and partly shaded places nothing can be finer. The coloring in the flowers is especially rich and At this writing we have a long border of these plants in bloom in our garden, and nothing gives us greater pleasure. They are so charming in habit, rich and varied in coloring, and so early to bloom, coming with the Spring-flowering bulbs, that nothing can be more acceptable. use them freely for decorating the dining-table and library windows, taking plants up from the border and putting them in fern-dishes and pots, where they go on blooming as if they had never been disturbed. Their hardiness has been pretty well settled by the severe Winter of 1911 and The minimum temperature at our country place was 24 degrees below zero. Not a single Polyanthus was injured, and they were planted in wet soil at that.

Large-flowered White. An improved variety with
very large flowers; very fine. 20c each; \$2.00 per 12; \$13.00 per 100.

Large-flowered, mixed, \$2.00 per 12; \$13.00 per 100.

Peonies

Few flowers have become more popular in recent years than the Pecnies. Even the common old-fashioned sorts possess unusual beauty and make excellent flowers for cutting because of their large blooms and vivid colors. The varieties which have been introduced in the past thirty years are much superior to those previously known. Some of them will attain a diameter of 8 inches or more, while in beauty of form and exquisite coloring they easily surpass any other perennial. Peonies possess another advantage which is important; they require no special care or attention—anyone can grow them successfully. We have long appreciated their possibilities, and our present collection includes

Each Per 12 Large flowers of perfect shape; milkwhite, with a creamy center having a few car-Anemonæflora rubra. Medium-sized blooms of brilliant red, with dark crimson carpels. Semidouble. Midseason 6.00 Baroness Schroeder. Flesh white fading to milkwhite; fragrant; large size 2.00 Couronne d'Or. Pure white blooms with a circle of yellow stamens about the center tuft of petals, which are tipped with carmine. They are quite large and flat, with petals of uniform width throughout. This is one of the best white varieties and an excellent sort for cutting75 7.00 a large number of varieties which we have succeeded in gathering together only after years of effort.

Well-developed root clusters, if planted in August or September, will bloom the following season. We do not offer large undivided clumps as we find that they do not justify their cost. It must be remembered that Peonies seldom bloom satisfactorily the first season after planting; many of the finest double sorts will produce single flowers at this time. The second season after planting it is difficult to tell medium-sized plants from the large undivided clumps sometimes sold; for that reason ordinary size plants produce typical blooms just as soon as huge and expensive root clusters, yet cost much less.

Hardy Perennial Phloxes

The beauty and usefulness of these grand border plants give them a deservedly first place among hardy plants. For cutting, their large trusses go a long way in floral decoration. In color they range from pure white to the richest crimson and purple, and from soft rose and salmon to bright coral-red, all having a delicate fragrance. **Perennial Phloxes** succeed in almost any soil enriched with manure, but are much benefited by a mulching of decomposed manure in Spring, and in hot weather an

Phlox, Miss Lingard.

occasional soaking of water. If the first spikes of bloom are removed as scon as over, and the plants given a good soaking of water, they will produce a second supply of flowers, thus continuing the display until late in Autumn. These later blooms are often finer than the first.

Field-grown plants, 25c each; \$2.50 per 12; \$15.00 per 100; except (where noted.

Albien. Pure white, with a faint red eye.

Antonin Mercie. Light ground color, one-half of each petal suffused lilac.

A. G. McKimmon. Early-flowering; lilac; large trusses.

Baron von Dedem. Intense scarlet or red; individual flowers and trusses are very large. One of the best varieties.

Duquesclin. Deep rose; lilac shading on edge.

Eclaireur. Purple-carmine blooms with a white center.

F. B. Waldeck. Splendid pure white.

Frau Antoine Buchner. Pure white, or slightly suffused with pink.

Kossuth. Deep rose, maroon center.

Frau Buchner. One of the prettiest delicate shades of mauve with crimson eye.

Independence. Vigorous dwarf white.

Mrs. Jenkins. One of the earliest pure white varieties.

Miss Lingard. Early-flowering; pure white blooms with a faint blac eye. Splendid for mass planting, as it will bloom in June and again in September if the old flowers are cut. Not infested with red spider.

N. Smith. Dark crimson.

Obergartner Wittig. Light rose, center lighter, with carmine eye.

O. Thalacker. Light pink of medium height.

Prof. Schleimann. Lilac-rose with carmine eye.

Rhinelander. Salmon-pink; both flower and truss are immense in size, and the color is intensified by a brilliant carmine eye.

Rynstroom. Rose-pink; flowers and trusses extremely large; possibly the finest Phlox of this color.

Riverton Jewel. Rose, with brilliant carmine or red eye.

R. P. Struthers. Rose-carmine or salmon with crimson eye.

Sieboldi. Very brilliant orange-scarlet, good habit. Sir Ed. Landseer. Carmine with crimson eye.

Thor. Salmon pink, eye darker.

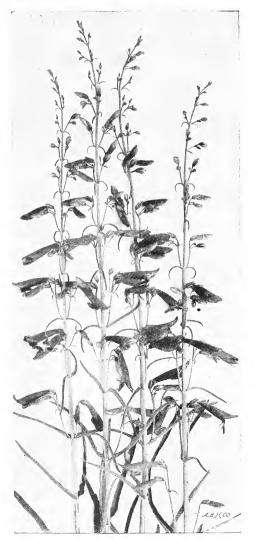

W. C. Egan. Extra-fine variety; delicate lilac with solferino eye; 7 to 8 inches across.

Widar. Reddish purple with large white center.

Mixed Varieties. Contains many of the preceding named varieties, but of course they are sent out unlabeled. 20c each; \$2.00 per 12; \$12.00 per 100.

Pyrethrum.

Pentstemon Torreyi,

Pyrethrum-Painted Lady

The Pyrethrums are so simply and easily cultivated that they may be recommended to all who possess a garden, whether small or large. They are perfectly hardy and absolutely invaluable for cut flowers through the Summer and Autumn months. The flowers are bright and elegantly borne on long stems: most convenient for vase decoration. In form the double varieties are somewhat aster- or chrysanthemum-like, and as their chief beauty is in the months of May and June, they may well be designated Spring Chrysanthemums, possessing the advantage over the chrysanthemums of being able to withstand the severest Winter without protection. The single-flowered varieties are veritable colored marguerites and possess a range of color and hardiness that marguerites might envy in vain. Nothing can surpass the Pyrethrum for profusion of flowers in the season; flowers succeed flowers without stint, and the blossoms are not injured by storm or sun. Their position should be in the border or in beds. The plants may, with advantage, be cut down after June, which will keep up a greater succession of bloom through the Autumn. Pyrethrums grow freely in any ordinary garden soil; a good rich loam suits them, perhaps, best, and in order to secure size, brilliancy and number of flowers, plenty of ordinary well-rotted manure may be added to well-trenched, well-drained soil, and plenty of water may be given when they are in bud in the dry Summer weather. A mulching may be applied in dry localities with advantage. The older varieties have been greatly improved upon during the past ten or fifteen years, which is the period during which Kelway & Son have made them a specialty, and the refined shape and brilliant or soft shades of the newer sorts have caused the Pyrethrum to become deservedly popular. We offer a splendid lot of plants of the choicest single varieties grown from Kelway's famous All Colors, Mixed, \$2.50 per 12; \$15.00 per 100.

Physostegia Virginiana

(Virginia False Dragonhead)

False Dragonhead. An American plant forming large clumps, which in July and August are covered with light pink flowers. \$2.00 per 12; \$12.00 per 100.

Pentstemon Torreyi

(Torrey Pentstemon)

An excellent variety of this American plant that is used chiefly for garden borders. The nowers, which are scarlet or crimson and orange, are produced freely in July and August. \$2.00 per 12; \$13.00 per 100.

Echinacea Purpurea

(Giant Purple Coneflower)

Flowers are reddish purple, with a cone-shaped center of delicate brown 3 to 4 feet. July and August. \$2.25 per 12; \$14.00 per 100.

Boltonia Latisquama

Very desirable for the hardy border. Flowers vary from pink to pinkish lavender and blue. ? to 4 feet. September to November. \$2.25 per 12; \$14.00 per 100,

Hardy Salvia

Azurea. A Rocky Mountain species; grows 3 to 4 feet high, producing during August and September pretty sky-blue flowers in the greatest profusion. \$2.50 per 12; \$15.00 per 100.

Sedum

Spectabile (Showy Stonecrop). Glaucous foliage; flat clusters, about 4 inches across, of rose or light purple flowers; 1 to 3 feet. September and October. \$2.25 per 12; \$14.00 per 100.

Stenanthium Robustum

(Mountain Feather Fleece)

This remarkably hardy perennial is, without doubt, one of our best new intro ductions, and may be classed with the showiest of all herbaceous plants. As the buds begin to unfold, they are quite upright, and of a light green tinge, gradually becoming whiter until they burst forth into a veritable snow-bank of drooping, fleecy bloom of the purest white, the panicles often 2 to 3 feet long. After several weeks, the flowers, as they ripen, turn to shades of pink and purple. It is a vigorous perennial, attaining a height of from 5 to 8 feet, and is absolutely hardy throughout the United States and Canada.

The Mountain Feather Fleece is of easy cultivation, but takes some time to become established, and, if given plenty of food, makes a wonderful show equaled by few plants of any description. It prefers a moist and partially shaded position. The wonderful effect of a large mass of Stenanthiums when in full bloom may be imagined—description can but inadequately convey the beauty of the delicate, feathered, drooping flowers. Strong plants, 35c each; \$3.50 per 12.

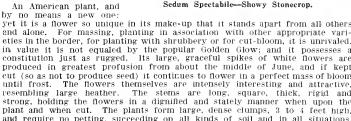

Hardy Salvia

Wallflowers

The old favorite fragrant Walklower. Mixed colors, including yellow, brown, etc. 20c each; \$2.00 per doz.; \$14.00 per 100.

Physostegia Virginica alba

yet it is a flower so unique in its make-up that it stands apart from all others and alone. For massing, planting in association with other appropriate varieties in the border, for planting with shrubbery or for cut-bloom, it is unrivaled. in value it is not equaled by the popular Golden Glow; and it possesses a constitution just as rugged. Its large, graceful spikes of white flowers are produced in greatest profusion from about the middle of June, and if kept cut (so as not to produce seed) it continues to flower in a perfect mass of bloom until frost. The flowers themselves are intensely interesting and attractive, resembling large heather. The stems are long, square, thick, rigid and strong, holding the flowers in a dignified and stately manner when upon the plant and when cut. The plants form large, dense clumps, 3 to 4 feet high. and require no petting, succeeding on all kinds of soil and in all situations. 25c each; \$2.25 per doz.; \$14.00 per 100.

This hardy plant of recent introduction is entitled to rank with single hollyhocks for picturesqueness. In good soil it grows from 8 to 10 feet high, branches freely, and for two months in midsummer is literally covered with its large, bright yellow, double flowers. As a garden or lawn plant it is extremely decorative, and equally so as a cut flower, and very lasting. We have used this a great deal in our landscape work, and have found a large circular group of it surrounded by the dwarfer Rudbeckia speciosa extremely effective 20c each; \$2.00 per doz.; \$12.00 per 100.

Mertensia Virginica (Blue Bells)

An early Spring-flowering plant, growing about 1 to 11/2 feet high, with drooping panicles of handsome light blue flowers, fading to clear pink. of the most interesting of our native Spring flowers. May and June. each; \$2.50 per dozen; \$15.00 per 100.

Single Violets

Single Violets have been brought to such a high point of excellence that they are in equal favor with the double sorts, and, being much easier to grow and free from disease, we strongly recommend the amateur to confine himself to this class. By the use of a coldframe a fine crop of flowers can be had in the Spring and in the Fall. \$2.00 per doz.; \$12.00 per 100.

Princess of Wales. A grand variety; very large flowers.

Sedum Spectabile-Showy Stonecrop.

Stokesia Laevis-Stokes' Aster.

Stokesia Laevis

(Stokesia or Stokes Aster)

A most charming and beautiful native hardy plant. The plant grows from 18 to 24 inches high, bearing freely, from early in July until late in October, its handsome lavender-blue centaurealike blossoms, which measure from 4 to 5 inches across. It is of the easiest culture, succeeding in any open sunny position, and not only is it desirable as a single plant in the hardy border, but it can also be used with fine effect in masses or beds of any size. 25c each; \$2.25 per 12; \$14.00 per 100.

Alba. Pure white variety of above. 20c each; \$2.00 per 12; \$12.00 per 100.

Thalictrum Aquilegifolium

(Columbine Meadow Rue)
This is undoubtedly one of
the most desirable hardy
plants in cultivation. Its fine
habit, beautiful foliage and
masses of lovely flowers,
varying from white to purple
through all intermediate
shades, make it one of the
most handsome things that
can be planted. A graceful
plant of much charm and distinction. 2 to 3 feet high;
blooms in May and June.
\$2.50 per 12; \$15.00 per 100.

European Globe Flower

(Trollius Europaeus)

An early Spring-flowering plant growing about 18 to 24 inches high with handsome bright yellow globe-shaped flowers, one of the most interesting Spring - flowering plants. Excellent for cutting. Does well in partial shade. 50c each; \$5.00 per 12.

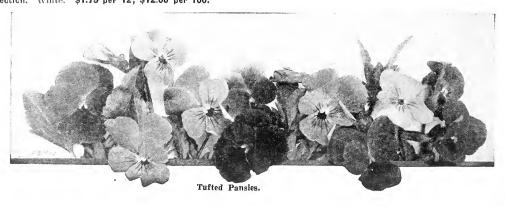

Thalictrum Aquilegifolium.

Tufted Pansies or Bedding Violas

The Tufted Pansies are hybrids of Pansies and Viola cornuta, and are quite distinct from Pansies in habit and coloring, and we think far more beautiful. The flowers are smaller, but unique in coloring, and the plants spread from the roots like a violet, making them true perennials. They are perfectly hardy, enduring the extremely cold weather of 1898-99 in an open border without protection. They are immensely popular in England and Scotland, where they are generally used for bedding and table decorations, and nothing can be more charming for either purpose. We have always admired these flowers in England, but were not certain that they would thrive in this climate, but after testing them a year in our garden we are convinced that they will do as well here as they do abroad. We have had a splendid lot of plants grown from the best collections in Scotland. They can be planted in the Summer, Fall or Spring.

Admiration. Dark. \$1.75 per 12; \$12.00 per 100.
Blue Perfection. Blue. \$1.75 per 12; \$12.00 per 100.
Grandiflora Lutea. Yellow. \$1.75 per 12; \$12.00 per 100.
Papilis. Light blue and white. \$1.75 per 12; \$12.00 per 100.
White Perfection. White. \$1.75 per 12; \$12.00 per 100.

Juniperus Chinensis Pfitzeriana in Foreground.

Juniperus Chinensis Pfitzeriana

(Pfitzer Juniper)

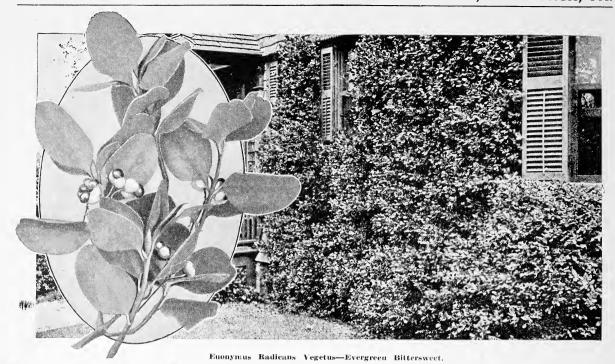

This is unquestionably one of the finest evergreens in cultivation. It is particularly adapted for foundation plantings against the house, and for this purpose is better than almost any other evergreen. Planted by itself on the lawn it develops into a splendid specimen. It is an evergreen of the broad, bushy type with sweeping gray-green branchlets, and its form and color make it unusually valuable for planting with other types of evergreens because of the contrast. More effects and better effects can be secured by using this Juniper than can be got from the use of any other similar hardy plant.

In addition to the artistic effects which the use of this plant makes possible, it has one advantage which makes it stand out from all the other evergreens; namely, it will thrive in city conditions recommend.

where other evergreens cannot be grown. It is not appreciably affected by smoke, soot or dust. We know of plantings in Pittsburgh which have been in place fifteen years or more without injury to the plants, while other types of evergreens planted at the same time and in the same situations have had to be replaced from three to four times.

Heretofore good plants of Juniperus chinensis pfitzeriana have been too scarce and too high priced to make it available for general use. Appreciating its great merit, we began, years ago, to propagate it extensively, and have at last succeeded in building up adequate stocks which enable us for the first time, to offer it at a price which will permit its being used in the quantities its unusual advantages recommend.

Fine bushy plants, 18-24 inches, \$4.00 each; \$40.00 per 12. Fine bushy plants, 12-18 inches, \$2.50 each; \$25.00 per 12.

EVERGREEN BITTERSWEET

Euonymus radicans vegetus

We have known for several years of the great merit of the vine, Euonymus radicans vegetus, so enthuiastically described by Professor Miller, and have been steadily getting up a large stock of it, and now have several thousand plants. It is a sport from Euonymus radicans, but absolutely distinct from that vine.

Planted in rows and kept sheared, this vine makes a splendid evergreen hedge. It is also a splendid groundcover plant for either sun or shade.

Perfectly hardy, but when planted in the Fall should be protected with a mulching or 3 inches of stable manure being careful not to cover the evergreen foliage. Very slow-growing at first, but when well established grows with great vigor.

Strong pot-plants, 50c each; \$5.00 per 12; \$35.00 per 100. Small plants, 35c each; \$3.50 per 12; \$25.00 per 100.

The Best Evergreen Vine For America

"Is the Ivy the best vine in the world? Doubtless every Englishman will cry 'Yes!' because the European or English Ivy (Hedera Helix) is the oldest evergreen vine in cultivation and has made the deepest impression in literature, art and history. But if your standard is merit, not association, there is another vine which seems to me inherently better, viz., the Climbing Euonymus, or as I now propose to call it, the 'Evergreen Bittersweet.' True, the form of its leaf is not unique like that of Ivy, but it has one overwhelming advantage in its gorgeous red berries, which are resplendent all Winter against a noble background of evergreen foliage. And in many other ways it has greater value than Ivy, even in regions where the Ivy is hardy.

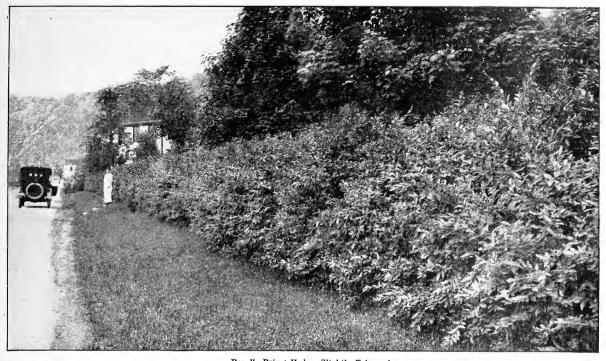

"The accompanying picture gives but a faint hint of the fivefold glories of the Evergreen Bittersweet. In the first place, it is evergreen, and therefore has an obvious advantage over deciduous vines in being beautiful 365 days of the year, instead of two weeks or seven months.

"Secondly, it is very accommodating as to soils, climate, exposures; is easy to grow; and will trail over the ground or climb to the noble height of 30 feet.

"Thirdly, it has an immense advantage over ivy, in being much hardier, growing 20 feet high in New England where ivy can only be grown as a ground-cover.

"Fourthly, its superb red fruits, which closely resemble those of our common wild bittersweet, seem divinely appointed to redeem our American Winters from their bleak, ugly and cheerless moods.

"And, fifthly, it promises to develop a strong American character, becoming universal and dear to the American heart. If I had a million dollars to spare I should like to plant an Evergreen Bittersweet against every stone, brick and concrete wall in America. The effect would be electrical, for it would add 100 per cent to the beauty of America and it would only be anticipating by a hundred years what will surely happen, for it is hardly possible that the world holds any plant with a greater power to transform a house into a home. As in England every home and every church is enriched, dignified and ennobled by ivy, so every American home will come to be concected so closely with the Evergreen Bittersweet that it will be impossible to think of one without the other."—WILHELM MILLER, in the Garden Magazine.

Regel's Privet Hedge, Slightly Trimmed.

The Best Hedges

Amoor River Privet

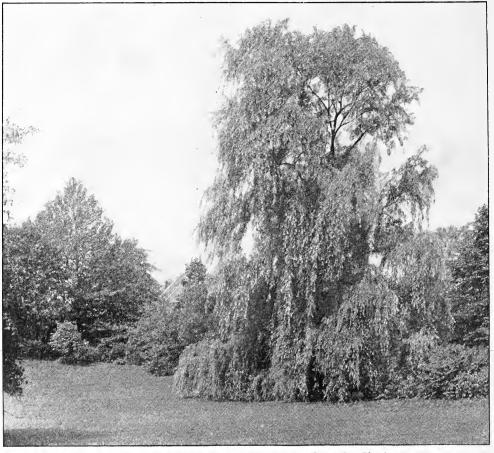

A more slender grower than the common Privet. Hardier than the California while the foliage is firer and of a lighter green, and retains better color during the Winter. It makes a more satisfactory hedge than the California, and should be more extensively planted. We offer the true variety. The Privet generally sold in the South for Amoor River is Ligustrum chinense, and is not hardy in the North. 2-3 feet, \$4.00 per 12; \$25.00 per 100.

Regel's Privet

Regel's Privet, Ligustrum Regelianum, is not only the best Privet, but it is also one of the very best shrubs for many purposes that we know of. It is perfectly hardy, of most beautiful, pendulous habit and splendid foliage. It is of vigorous growth and will thrive in either sun or shade. In good soil it will attain a height of 8 to 10 feet, and spread almost as great. It is fine as a specimen or for planting in masses in shrubbery, but its greatest value is for hedging. As a hedge plant it is unsurpassed. It can be kept closely trimmed or trimmed but little, when it will preserve its natural drooping character which is most graceful and beautiful. A partially trimmed hedge of this Privet on the grounds of Mr. Clarence Byrnes, Sewickley, Pa., we think one of the most handsome hedges we have ever seen. On account of its spreading habit this Privet makes a hedge solid to the ground whether it is sheared hard or not. We can not understand why people continue to plant California Privet, which is inferior in every respect and not reliably hardy. Regel's Privet is somewhat higher priced, but on account of its spreading habit it requires only half the quantity that it does of the California Privet to plant a hedge. For a hedge, plant Regel's Privet 18 inches apart in a single row. \$4.50 per 12; \$35.00 per 100.

Japanese Barberry

We are frequently asked to recommend the best shrub for hedge planting, and after many years experience, we are decidedly of the opinion that the Japanese Barberry, Berberis Thunbergi, is the best hedge plant in existence, and either as an ornamental, defensive, trimmed or untrimmed hedge, it is unsurpassed. As an ornamental hedge it is beautiful throughout the year, its abundant crop of bright red berries making it even more attractive in the Winter than in the Summer. Its compact growth and thorny branches make a defensive hedge that will turn cattle after five years growth. As an untrimmed hedge, it requires no attention except an occasional cutting of a few straggling branches. The natural growth is so dense and even that it forms a perfect hedge without shearing, but if a formal hedge is desired, by shearing, it can be made as even as a stone wall. The Berberis is absolutely hardy, of the easiest culture, and will grow in any soil or situation. It will stand considerable shade and can be grown under trees if not planted too close to the trunks. It is of slow, compact growth, but will eventually attain a height of 5 or 6 feet. It is one of the very best of shrubs for general planting. For a hedge, plant a single row, 18 inches apart in the row. We have a very large stock of fine plants 18-24 inch plants, \$4.50 per 12; \$35.00 per 100.

Salix Salamoni, From a Photograph Taken Ten Years after Planting.

Salix Salamoni

This is a variety of the Weeping Willow, but not nearly so pendulous as the common form, and we believe it to be the fastest-growing tree in the world, not excepting the eucalyptus, so much planted in California. We cut down one of these Willows in our nursery when it was seven years old, and it measured 13 inches

through the trunk. It makes a very good-looking tree, as will be seen by the illustration above, and has the good qualities of leafing out very early in the Spring, and of holding its foliage until late in the Fall. This tree starts into growth quite early and should be planted as early as possible in the Spring.

One-year-old trees, 75c each; \$8.00 per 12; \$45.00 per 100. Two-year-old trees, \$1.25 each; \$13.00 per 12; \$85.00 per 100. Trees older than this are really too large to handle.

Recent Introductions and Special Varieties

Hybrid Tea Roses

AMERICA (Hills'). Large rose-pink, fine shaped flowers, sweetly scented, on long stiff stems. Deep glossy green foliage: almost thornless. \$1.50 each.

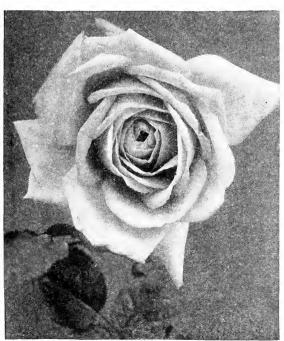

LOS ANGELES (Howard & Smith). One of the finest Roses ever introduced. The growth is vigorous and produces a long-stemmed flower of a luminous flame-pink tone with coral and shaded with translucent gold at the base of the petals. The buds are long and pointed. \$1.50

KILLARNEY WHITE. Pure white. Sport from Killarney. long and of fine form. \$1.00 each.

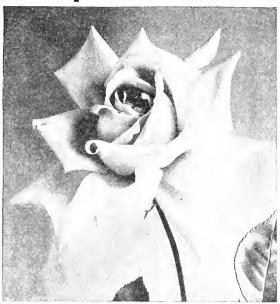

MISS LOLITA ARMOUR (Howard & Smith). In 1921 it won the Bagatelle (Paris) prize. Its fragrant blooms develop from well-shaped buds, chrome-yellow at base, shading to orange and copper hues on the reverse of the petals, and with much of the copper and shrimp pink tints in its make up. Free blooming. \$1.50 each.

RED LETTER DAY (A. Dickson & Sons). An exceedingly beautiful Rose of infinite grace and charm. Its velvety, brilliant, scarlet-crimson buds and fully opened flowers never fade. \$1.00 each.

COUVENIR DE CLAUDIUS PERNET (Pernet-Ducher, 1920). Awarded the Bagatelle prize. Its color is a definite and lovely sunflower-yellow, deepening in the center, and it retains this color indoors and outdoors, in bud and full bloom. The plants are of branching habit, with brilliant green foliage and few thorns and the buds are produced on long, stiff stems. \$2.50 each.

Miss Lolita Armour.

Los Angeles.

Souvenir de Claudius Pernet.

Roses

There are probably 2,000 varieties of Roses in the United States. Each year sees a number of new introductions added to the large list, so naturally it is a great task to select representative blooms from such a great assortment.

We have not tried to include in our list every beautiful Rose grown in this country, as many of the varieties differ so slightly

that only an expert can distinguish between them. The varieties here given are quite distinct, and have established reputations as the best of their kind. You will find here also some new sorts which are very attractive. Because of our careful selection you can order any variety and be confident that it will be worthy of your garden.

Teas and Hybrid Teas—Everblooming Roses

Prices, except where noted, for strong 2-year field-grown plants, \$1.00 each; \$10 per 12; \$75 per 100.

Betty. Noted for its long blooming period, which lasts from June until frost. Color is a rosy copper, flushed with golden yellow. Blooms are unusually large, and are quite full in form. Remarkably fragrant.

Columbia. One of the largest Roses among the recent introductions, flowers occasionally measuring 6 inches across. The color is a splendid pink, which becomes more intense as the blooms grow older. The flowers are borne on long stems that are usually thornless 10 inches below the flower.

Dean Hole. Large, pointed, silver-carmine blooms, shaded with crimson, delicately fragrant. The bush produces great quantities of blooms.

Gruss an Teplitz The crimson-scarlet blooms are pro-June until the time of killing frosts. An excellent variety for mass plantings and for Rose hedges. Hadley. Deep velvety crimson, which retains its color. Both buds and flowers are beautifully formed.

Jonkheer J. L. Mock. Practically a double-colored bloom, because of the bright cherry-red on the outside of the petals and the shiny, silvery white on the inside. Unusually large and well-

formed.

Kaiserin Augusta Victoria. An old sort which possesses so many perfections that it is still one of the most popular varieties. The

perfections that it is still one of the most popular varieties. The creamy white blocms are quite large and full, and are produced in great numbers until late Autumn.

Killarney. The long, pointed buds are an exquisite pink, and are borne in great numbers. This is a favorite for cut-flowers and is still one of the most popular varieties, although it has been known for more than twenty years. Delicious perfume.

TEA AND HYBRID TEA ROSES-Continued

Mme. Edouard Herriot. Buds coral-red, opening to medium-sized blooms of coral-red, shaded with yellow and bright rose-scarlet, which still later change to shrimp-red. Winner of the Gold Cup offered by the London Daily Mail for the best new Rose at the International Exhibition in London.

Mrs. Aaron Ward. Long, shapely buds of Indian-yellow, occasionally flushed with salmon-rose. Flowers freely all through the

season.

Mrs. Charles Russell. Large, globular, shapely blooms of rosy carmine, with scarlet center. The bush makes a strong growth and produces a multitude of specimen blooms. Ophelia. Light salmon-pink blooms which shade to yellow at the bases of the petals. Considered the best Rose of its color, as the blooms are large in size and very attractively formed. Blooms freely throughout the season and far into the Autumn.

The strong plants produce hosts of handsome flowers, Radiance. which range in color from light silvery flesh to salmon-pink, suffused with pink and yellowish coppery red.

Sunburst. Large golden yellow flowers, with orange-yellow centers, borne on strong, upright stems; excellent for cutting.

Willowmere. The buds are a combination of carmine-coral and red, but open to arich shrimp-pink, shaded with yellow in the center and toning to carmine-pink at the edges of the petals.

Hybrid Perpetual Roses

Prices for strong 2-year field-grown plants, \$1 each; \$10 per 12. Collection, \$75 per 100.

Anna de Diesbach. Large, pale rose blooms of superb shape, | each set in a cup of lovely foliage. Delightfully fragrant.

Captain Christy. The plump buds have backward curling petals, which show perfectly the contrast of light and dark pink. When open the blooms are darker toward the center. The plant is rather dwarf but is exceedingly vigorous and produces a great number of blooms annually.

Captain Hayward. Bright crimson-carmine blooms of perfect form; exceedingly fragrant.

Clic. The large globular flowers are borne on long stems, making this a valuable variety for cutting. The color is satiny flesh, with pink center.

Frau Karl Druschki. One of the most popular white Roses. The blooms are quite large, sometimes exceeding 5 inches in diameter. The growth of the plant is unusually strong; it bears great quantities of blooms in June and occasionally will bloom in the Autumn.

General Jacqueminot. An old variety with large, full blossoms, brilliant scarlet-crimson, with deeper veinings near the petal bases. Often called the "Jack Rose" and considered one of the best of its color and class. No rose-collection is complete without it.

George Arends. The plant makes a strong growth, and bears an abundance of well-formed pink flowers.

Magna Charta. Noted for its fragrance and abundance of blooms. The color of the flowers is a rosy pinkish carmine.

Mme. Gabriel Luizet. Light, satiny pink blooms of splendid form. A variety which is not found in many collections.

Mrs. John Laing. Soft pink blooms, extremely large and exceedingly fragrant. Most attractive when in bud, as the petals are quite long. The plant makes a strong growth.

Ulrich Brunner. The light red flowers are borne in profusion, on long stems. The color of this flower is quite distinct from other red varieties in this list.

Paul Neyron. Dark rose; of enormous size; perhaps the largest of all.

Prince Camille de Rohan. Very dark, velvety crimson, almost black. Many experts consider this to be the best dark Rose in existence

American Pillar. Produces a great abundance of rosy pink flowers. In blooming season the leaves are almost concealed. The foliage is leathery and practically insect proof. This may be grown as a climber or may be pruned down to bush form. each; \$7.50 per 12.

Aviateur Bleriot (The New Yellow Rambler). We have discarded the old Yellow Rambler in favor of this new variety, in which we have a strong-growing plant with beautiful glossy, insectand disease-proof foliage, and bearing large clusters of medium-sized full double flowers of a saffron-yellow, deepening to an almost golden yellow at the center. \$1.00 each; \$10.00 per

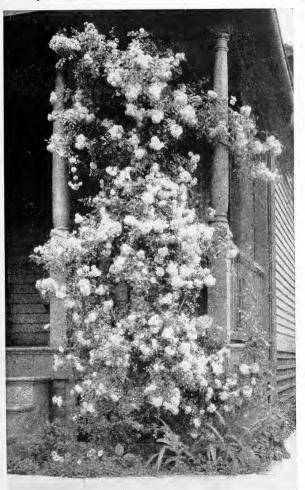

Climbing American Beauty. A cross between American Beauty and an unnamed seedling. Color and fragrance are similar to the popular parent flower. Plant makes a strong growth and is extremely hardy. Most of the blooms are produced in May and June, but there is a light crop of flowers throughout the growing season. 75c each; \$7.50 per 12.

Crimson Rambler. Unsurpassed in this class because of its beautiful deep crimson blooms and its absolute hardiness. sort for hedges and trellises. 75c each; \$7.50 per 12.

Dorothy Perkins. One of the most attractive Climbing Roses. Its beautiful shell-pink blooms literally cover the plant, being borne in huge clusters which frequently contain 30 to 40 individual flowers. Absolutely hardy. 60c each; \$6.00 per 12; \$45.00 per 100.

Dr. W. Van Fleet. Notable for its buds, which are a delightful flesh-color. The full blown flowers will average 4 inches in diameter, and are borne on long, sturdy stems, which make it a good variety for cutting. The plant is remarkably hardy. 75c each; \$7.50 per 12.

Excelsa (Red Dorothy Perkins). The flowers are a clear, bright crimson in color; the foliage is always green and grows with never a trace of mildew, which frequently disfigures Crimson Rambler. 60c each; \$6.00 per 12.

Dorothy Perkins,

CLIMBING ROSES-Continued.

- Gardenia. Large golden yellow flowers which change, as they age, to creamy white. Bears a great number of blooms and is extremely hardy. 600 each; \$6.00 per 12.
- Hiawatha. Deep crimson blooms, shading to snowy white at the base of the petals. The light, glossy green foliage forms a pretty background for the flowers. Single. 60c each; \$6.00 per 12.
- Lady Gay. Makes a very rapid growth and produces great quantities of blooms. When first open, the flowers are cherry-pink, but they gradually tone to soft white in a few days. Extremely hardy. 60c each; \$6.00 per 12.
- Newport Fairy. A strong, sturdy grower, with healthy, bright green foliage. Produces an abundance of lovely single flowers of deep pink color, shaded lighter in center. Charming. 75c each; \$7.50 per 12.
- Paul's Scarlet. The best of the newer scarlet climbers and a real improvement on the older sorts. \$1.00 each.
- Silver Moon. Long, well-shaped buds, quite creamy yellow and slightly Tea-scented when they first appear. When the blooms open they are truly immense, often attaining a diameter of 5 inches. They are semi-double in form, with pure waxy white petals to which the center of bright yellow stamens forms a brilliant contrast. The foliage seems to be immune to disease. 90c each; \$9.00 per 12.
- Tausendschon. Beside being almost free from thorns, this variety is remarkable for the different colors which appear in the blooms. The opening flowers are pink but change to rosy carmine as they expand. Occasionally almost white flowers will be found upon the bush. 60c each; \$6.00 per 12.
- White Dorothy Perkins. Similar to well-known Dorothy Perkins, except in color. Just as free-flowering and productive. 60c each; \$6.00 per 12.

Rosa Wichuraiana

Memorial or Wichurian Rose

Plant is literally covered in blooming season with beautiful single, white flowers, which are followed by an abundant crop of bright red berries. Plant is quite free from attacks of insects and diseases. 60c each; \$6.00 per 12.

Rosa Wichuraiana Hybrids

- Pink Roamer. This is without question a hybrid of the "Sweetbrier," and carries its characteristics in bloom, while the growth, which is very rampant, partakes more of the "Wichuranana." The single flowers, which are produced in close heads, are nearly two finches in diameter; bright rich pink, with almost a white center, which lightens up the orange-red stamens, producing an effect which, combined with the fragrance, makes it one of the most valuable Roses in cultivation. 75c each; \$7.50 per 12.
- Universal Favorite. A free grower, producing long, branching shoots, with bright, shiny foliage in abundance, and soft, light pink double flowers two inches in diameter; strongly perfumed. 60c each; \$6.00 per 12.

Miscellaneous Varieties

- Blanc Double de Coubert. One of the best Rugosa types. The blooms are often 4 to 5 inches in diameter. Semi-double; pure white in color; attractively fragrant. \$1.00 each; \$10.00 per 12.
- Conrad Meyer. When fully opened the blooms are clear silvery rose; they possess a fragrance which is deliciously penetrating. \$1.00 each; \$10.00 per 12.
- Harison's Yellow. Bright golden yellow, semi-double flowers completely cover the sturdy plant in Spring. A splendid varicty. \$1.00 each; \$10.00 per 12.
- Marechal Niel Rose. Extra strong, in 6-inch pots. \$1.00 each.
- Persian Yellow. An Austrian Briar Rose, which is very popular because of its splendid golden yellow color. Although the flowers are only medium in size they are extremely full. \$1.00 each; \$10.00 per 12.
- ROSA rugosa. Forms an upright shrub, with spreading branches densely covered with spines and prickles. The leaves are wrinkled, dark lustrous green above, lighter beneath. The blooms are purple or white, and ordinarily 3 inches or more across. They are followed by bright red fruits which cling to the bush a long time. 75c each; \$7.50 per 12.
 - rugosa alba. Originally imported from Japan. Pure white flowers with five petals, highly scented, followed later by pretty berries. \$1.00 each; \$10.00 per 12.

Wichuraiana Roses.

ROSA-

- carolina (Pasture Rose). The well-known American Wild Rose which produces quantities of pink blooms in July. 50c each; \$5.00 per 12.
- lucida (Virginia Rose). A dwarf form of R. carolina. The attractive bright pink flowers are followed by brilliant colored berries. 50c each; \$5.00 per 12.
- multiflora (Japanese Rose). A beautiful white Japanese Rose which is frequently used as a climber. 50c each; \$5.00 per 12.
- rubiginosa (Sweetbrier Rose). The single bright pink flowers are borne in small clusters. The foliage is blue-green, tinged with purplish red.
 50c each; \$5.00 per 12.
- setigera. (Prairie Rose). Valuable climbing sort, which attains a height of 6 feet. The single, deep rose flowers are borne in great abundance. 50c each; \$5.00 per 12.
- spinosissima (Scotch Rose). Flowers are borne singly but are closely arranged along the stems. Ordinarily white, they are occasionally a light pink or yellow. The blooms are followed by black fruit. This Rose is considered the best hardy substitute for the matchless Cherokee Rose of the South. Potplants, \$1.00 each.

Moss Roses

These Roses are hardy and vigorous, thriving in almost any soil. Prune only the very old canes, as flowers are produced only on canes which are more than two years old.

- Blanche Moreau. Large, pure white flowers are borne in clusters, both flowers and buds are heavily mossed. \$1.00 each; \$10.00 per 12.
- Crested Moss. Deep pink flowers of delightful fragrance. \$1.00 each; \$10.00 per 12.
- Salet. Rose-pink, with very double blcoms. \$1.00 each; \$10.00 per 12.

Each Per 12

Hardy Climbing Plants

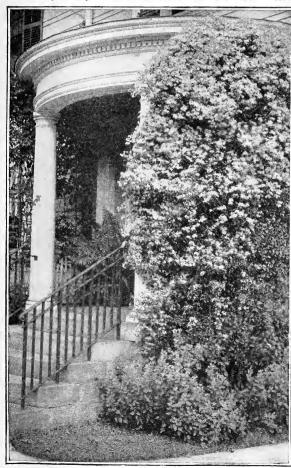

ACTINIDIA arguta (Bower Actinidia). A Japanese climbing plant with attractive dark green foliage and a multitude of white flowers having purple centers. Edible fruits follow the flowers \$0.50

AKEBIA quinata (Five-leaf Akebia). Quite ornamental and graceful, with pretty dark leaves and numerous bunches of violet-brown flowers. \$5.00 Pleasing cinnamon fragrance. Prefers a sunny Pleasing cinnamon fragrance. Prefers a sunny situation

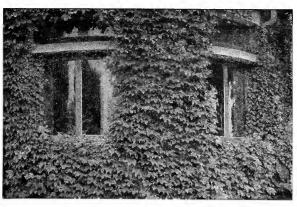

AMPELOPSIS quinquefolia. Virginia Creeper, Clings firmly to walls or any support and makes a dense covering because of its large, handsome, green foliage. In the Fall the leaves change to brilliant scarlet. One of the most decorative native climbers

veitchi. Boston Ivy. Grows very rapidly after it is once established, and clings closely to any surface. The large, dark green leaves turn to rich crimson in the Fall. Standard Plants...

Extra-strong plants .50 5.00 3.50 30 3.00 5.00 duces numerous bunches of brownish colored flowers which bear a slight resemblance to small pipes. The leaves are large and round, hanging so that they overlap each other and 5.00 which gradually turn to black

Clematis Paniculata.

Ampelopsis Veitchi-Boston Ivy.

BIGNONIA radicans (Trumpet Creeper). The rich, deep green shade of the foliage and the

handsome crimson of the flowers make this one of the most ornamental climbing vines. It grows very rapidly	\$0.50	\$5.00
CELASTRUS paniculata. Japanese Bittersweet. Valuable because it grows in almost any soil and will succeed as well in shaded places as in sunny positions. The bright red fruits in orrange pods usually remain throughout the Winter. This variety is not altogether hardy and should be planted in sheltered positions north of Pennsylvania.	.50	5.00
scandens. American Bittersweet. Branches of this vine are often sold for Christmas decorations, because of the bright orange-scarlet pods and their attractive scarlet seeds. The vine makes a rapid growth	.40	4.00
CLEMATIS coccinea. Scarlet Clematis. A hand- some, hardy sort, with attractive foliage; from June until late in the Fall it is covered with bright coral flowers	.60	6.00
henryi. Large creamy white flowers of remarkable beauty jackmani (Jackman Clematis). Great velvety purple flowers are borne in profusion. This is the large-flowered sort commonly planted	1.00	10.00
paniculata (Sweet Autumn Clematis). Probably the most beautiful of all the hardy vines. Makes a strong, luxuriant growth, has delicate foliage, and blooms profusely. In August or September the white flowers literally conceal the vine; when the petals have fallen they are followed by seed clusters and a profusion of feathery "styles" like drifted snow. Usually the vine is given a support, but this is not required for it is just as handsome when planted in rock-work or so arranged that its growth is made over sloping banks. 2-year-old.	.30	3.00 5.00

Hardy Herbaceous Perennials

ALL THE plants included in this section come under the general heading of Hardy Herbaceous Perennials. It may be a little clearer, how-ever, to say that this title describes a class of plants which live outdoors during Winter with little or no protection, producing foliage, flow-er-stems, and blooms the following Summer.

Until hardy plants come into more general use, we cannot hope for the artistic, interesting and beautiful gardens in this country that are found in the Old World. However, the individual beauty of most of the perennials is so great that the garden cannot fail to be interesting and lovable, if the cultural skill is such as to bring the plants to perfection. With the material offered in this list, the most beautful and charming gardens can be made; gardens that change their aspect with every changing season; gardens that increase in value and beauty year after year.

One of the most effective ways of using perennials is to

arrange them in a wide border in front of hedges or shrubs. arrange them in a wide border in front of hedges or shrubs. The only objection to this arrangement is that the roots of the shrubs or hedges get into the border and rob the perennials of a large share of their food. This difficulty can be prevented by erecting a concrete wall between the perennials and the hedge or shrubbery. This wall should be about 2 feet deep and 4 inches thick, and may be inexpensively constructed of gravel and cement.

Another effective arrangement is a broad grass walk

Another effective arrangement is a broad grass walk direct to the vegetable garden, with the border on either side of the walk. Trellises erected back of the border and covered by climbing roses or flowering vines will add very much to the beauty of this arrangement.

Cultivation

Cultivation is of the simplest: Beginning with any good garden soil, dig it deeply and enrich with old rotted stable manure. The best time to plant hardy perennials is when they are just starting into growth in the Spring or early in the Fall. The soil should be comparatively dry when plants are set out: avoid wet planting. Do not make the mistake

of planting too thickly. The nearest approach to a rule which may be followed in planting is to set plants to grow to a height of 2 feet or less, a foot apart, and all taller one-half their height. For example, Aquilegia and Coreopsis, which grow 2 feet high, may be planted a foot apart, while Delphinium Formosum and Japanese Iris, which grow

3 feet high, should be 1½ feet apart.

During the Summer the soil about the plants should be frequently stirred and weeds kept down. During hot, dry weather, or when it is not convenient to water, a mulch of any loose, light material is very beneficial in retaining the moisture and preventing the ground from baking. Grass clippings from the lawn are excellent material for this purpose.

Winter Protection

About the middle of November, or later, when all soft About the middle of November, or later, when all soft growth has been killed and the plants are thoroughly ripened, the old hard-wooded stems should be removed and burned. Then cover the plants with 2 or 3 inches, not more, of loose, strawy stable manure. Care must be taken, however, not to cover the foliage of evergreen plants such as Phlox subulata, Hardy Pinks, and Candytuff, as such a covering would cause the foliage to rot and kill the plants. Most bardy plants which flower during the Springer early

a covering would cause the foliage to rot and kill the plants. Most hardy plants which flower during the Spring or early Summer months.—Peonies, Anthericums, Dielytrae, Funkias, German Iris, etc., are better left undivided and undisturbed for several years, but they should be given a liberal dressing of stable manure or other fertilizer every Spring. The late-flowering plants, Fige Phloxes, Helianthus, Rudbeckias, Asters, Boltonias, Physostegias, etc., are better for being replanted at least every two years. The Japanese Anemones are an exception; they should be allowed to remain undisturbed for several years.

In the following list the height and time of bloom are stated, but it must be understood that these are only approximate, as both height and blooming period will vary

proximate, as both height and blooming period will vary with soil and season.

Plants suitable for growing in the shade are marked with a (*); for growing in partial shade are marked with a (†).

Special Offers of Hardy Plants in Variety.

Plants in the following collections will be the best and most desirable varieties and of the best quality, but in every instance the selection of varieties is to be made by us; but if purchasers will state the things they have, or don't wish, these will not be included in the selection. Sometimes people write asking for a list of the plants contained in these collections. This cannot be given, so please save us the unpleasantness of refusing by not asking for it.

ASTILBE ARENDSI. These hardy plants are easily grown in the perennial border, and should give quantities of blooms all Summer. In greneral they are quite tall, varying from 3 to 5 feet, according to the soil conditions and location. A new type obtained by crossing one of the older varieties with some of the new Japanese introductions. The plants are of vigorous growth, and produce feathery heads of howers on many-branched stems. This variety will succeed in ordinary garden soils, if shaded from hot sun and given plenty of moisture.	
arendsi, Ceres. Feathery panicles of light rose, flushed with a delicate silvery sheen. 50c each. \$5.00 arendsi, Pink Pearl. Panicles quite small but	
extremely dense; color a dainty pearl-pink 5.00	
arendsi, Pyramidalis. Pure white50c each 5.00 arendsi, Vesta. Exceedingly graceful plumes of	
lilac-rose. The plants make a strong growth and are vigorous bloomers 50c each 5.00	
thunbergi Mcerheimi. A new variety introduced from Europe. The panicles are extremely large, but the flowers are quite small and pure white. July	
BAMBUSA. See Arundinaria.	
BAPTISIA australis. Grows wild from Pennsylvania to Texas. The foliage is bluish green, while the flower-stems, which are 3 to 4 feet tall, bear long racemes of pea-shaped, indigoblue flowers. 2 feet. June and July 2.25	14.00
BELAMCANDA chinensis (Pardanthus chinensis). Blackberry Lily. Grows readily in sandy loam and full sun. The leaves are 12 to 18 inches long. The flowers are orange and red, followed by seeds which resemble blackberries	13.00
BELLIS perennis. English Daisy. An extremely hardy little plant, often showing blooms as early as March and continuing until the first of July. In cool weather, it frequently blooms again in the Autumn. It is a splendid edging plant for cool soils.	
Snowball. Pure white, full double blooms 2.00	12.00

Phlox Divaricata Canadensis

One of our native varieties that is but rarely met with, and which has been introduced into Europe the past few years as a novelty. A plant that is certain to meet with much favor when better known, as nothing can produce such a cheerful corner in the garden in very early Spring. Frequently beginning to bloom early in April, it continues until about the middle of June, with large, bright lilac-colored flowers, which are produced on stems about 10 inches high, in large, showy heads, and are very fragrant. Extremely fine for naturalizing in the woods and shady places. Although this Phlox is usually found growing wild in shady places, it will do better if it is planted where it has full exposure to the sun and will bloom more freely2.00

Native and American Grown Lilies

Of all the hardy plants about the garden, none give greater returns of beauty and color for the slight amount of trouble involved. While Lilies prefer a partly shaded situation, where the soil is cool and moist, they are almost as successful if planted behind borders of Irises, in the dry, hot soil those plants prefer. Their blooms are always large and symmetrical; their colors brilliant and illuminating. Inexperienced gardeners plant them because they are easy to grow; experts retain them because of their beauty. Our list contains practically all the favorite varieties.

Lilium Superbum.

Special Offer of Superbum Lilies

We make an annual contract to have 25,000 bulbs of this grand Lily grown for us. This enables us to offer it at low prices, which make it available for naturalizing in quantity. It sunquestionably one of the most satisfactory Lilies that can be planted either in the garden or in meadows, on the edge of woods or in any rough or wild parts of the grounds, where it will take care of itself without any attention whatever after planting. It will also thrive in wet or swampy places. It is a grand Lily, often growing over 8 feet high, and produces twenty to thirty beautiful orange-red flowers in July, when flowers are apt to be rather scarce.

Prices of extra-selected bulbs, \$2.25 per 12; \$4.00 per 25; \$15.00 per 100; \$35.00 for 250.

Flowering Shrubs and Low Growing Trees

Wouldn't you like a garden with nowers from Spring to Fall? Or almost from "frost to frost"? Well, you can have a garden like that if you make it with flowering shrubs—but, of course, varieties that bloom in sequence must be selected. First, the golden yellow Forsythias, as brilliant as Spring sunshine; Redbuds and Dogwoods, Spireas and Weigelas, Lilacs and Mock Oranges, Snowballs and Roses of Sharon. Then there are climbers, like the Honeysuckles, Wistarias, Clematis, which help to round out the "frost to frost" shrub collection.

But in addition to the wonderful blooms, flowering shrubs invariably form a background for every landscape plan. They are usually planted in masses, as most kinds are far more effective this way. Some particular varieties, however, are well adapted to specimen plantings, and those have been so noted in the de-

scriptions.

Our stock of shrubs is unsurpassed in quality, but our prices will be found much lower than those made by most nurserymen. As a rule, shrubs are much more effective when planted in masses, and our low prices permit them to be used freely in this way.

There is practically no difficulty in arranging a planting of flowering shrubs. The only care need be that the dwarf types are not entirely shaded by those which make a taller growth. For your convenience we have indicated in each description the height, spread, and blooming period. For example, "H 3-4, S 3-4, June," may be interpreted "height 3 to 4 feet, spread 3 to 4 feet, flowers in June." It is understood that the sizes given are only approximate, and will vary considerably according to soils and climate.

Shrubs marked * can be grown in partial shade, but they will also thrive in full exposure to the sun.

Special Offer of Shrubs

We want to encourage the planting of shrubs. To be effective they should be planted in masses, but when dealers or nurserymen ask 75 cents each for easily grown shrubs there is not much encouragement to plant them freely. We have made arrangements by which we can supply our customers with well-grown shrubs in the best varieties at the extremely low prices quoted below.

but in every instance the selection of varieties must be left to us. But in ordering, if it is stated that certain shrubs are not wanted they will not be sent. We guarantee these shrubs to be sattsfactory in both quality and variety. We can not give in advance of filling the order a list of varieties contained in these collections.

LLMOND, Flowering. See Amygdalus. LLTHÆA, Rose of Sharon.	Each	Per 12

*AZALEAS. These splendid shrubs have most showy blooms, and should certainly have a prominent place in every garden. For brilliant color and profusion of blcom, the Azaleas are absolutely unrivaled; in blooming-time the bushes are literally covered with flowers. On large estates, in particular, Azaleas should be planted in great quantities, for few shrubs offer such delightful possibilities. They are unsurpassed for naturalizing, and they make valu-		
able specimens. Hardy Azaleas are our spe-		
cialty, and we have the largest collection and		
the best stock in America. arborescens. Smooth Azalea. The foliage of this		
variety is considered the best of all the Azaleas,		
the feaves retaining their luster all Summer and bronzing beautifully in the Fall. Flowers white, with red stamens; very fragrant. Mid- dle of June. In cultivation, a spreading shrub		
3 to 6 feet wide. H 6-10, 1½ to 2 ft	2.50	22.00

	ach	Per 12
Scabra, Pride of Rochester. Large-flowered beutzla. A robust form with very handsome double white flowers tinged rose. Excellent for use as a specimen plant. One of the best varieties. H 6-8, S 5, June. 3 to 4 ft	0.50	\$5.00
scabra crenata. Very like D. scabra candidissima in habit of growth, but the blooms are pink or rose-pink. H 6-8, S. 6. 3 to 4 ft	.50	5.00
gracilis. Slender Deutzia. This is the best sort for a low hedge, as it forms a rather compact mass, and makes a dwarf growth. The showy white blooms come in June. It can also be used for forcing by bringing the branches into the house at intervals before the blooming period. H. 2-3, S 3	.60	6.00
lemoinei. Lemoine's Deutzia. Resembles D. gracilis, but is taller and broader and has larger, pure white flowers. H 4-5, S 4, May	.60	6.00
DIERVILLA florida (D. rosea). Numerous spreading branches, dark green leaves. The large and showy rose-colored flowers are produced in great profusion	.60	6.00
florida nana. The dwarf form, having leaves variegated with white. The flowers are white and slightly tinged with rose	.75	7.50
hybrida candida (Weigela candida). Covered in May and early June with large, white, trumpet-shaped flowers. This shrub is very graceful in form and makes a strong growth if planted in moist, loamy soil. H 6-8, S 8.	.75	7.50
hybrida, Eva Rathke. Large crimson or carminered flowers of dazzling brilliancy. This is the favorite red variety because of its almost continuous bloom. H 4-5, S 5. 2 to 2½ ft	.75	7.50
bybrida, Floreal. Very unusual flowers of pale rose, shaded with mauve, and with bright carmine throats. This shrub is remarkably handsome, both in bloom and in habit	.75	7.50

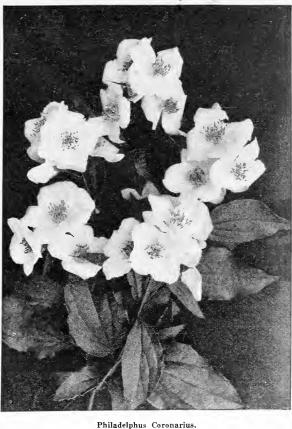

Hydrangea Paniculata.

SHRUBS—Continued

hybrida, Gracieux. White blooms with sulphuryellow throats, the outside of the blooms and the buds are salmon-pink. This variety of colors, when presented on the single plant, is distinctly unusual	Each	Per 12
*sessilifolia. Native Weigela; shrubbery Honey- suckle. The branches are quite spreading and give the bush a pleasing appearance, will stand dense shade and is one of the best shrubs for planting under trees	.60	6.00
ELÆAGNUS longipes. Cherry Elæagnus. Bears a profusion of yellowish white flowers, followed by oblong, scarlet, lustrous fruit which hangs gracefully on long, slender stems and is covered with small white dots; attracts birds. H 5-6, S 5, May	.75	7.50
umbellata. Japanese Oleaster. Fragrant yellowish white flowers and berries that are silvery white when young, but change to scarlet as they ripen. Many berries are often massed at one point on the branch. Fruit attracts birds. H 10-12, S 8, June	.60	6.00
EUONYMUS alatus. Winged Burning Bush. In Autumn the oval, bright green leaves of this shrub fade to gorgeous tones of red and crimson. Throughout the year its branches are covered with corky wings of projections from the bark. Splendid for specimen planting. H 6-8, S 6	1.00	10.00
americanus. Strawberry Bush. An erect grower that is attractive at all seasons of the year because of its slender green branches. The peculiar, rose-colored fruits, with scarlet pods, make this shrub extremely decorative	.75	7.00
europæus. European Spindle Tree. Shrub or small tree; fruit dull red with orange seeds. Leaves remain green until fruit has colored. H 10-12, S 4-5, May	.75	7.50
EXOCHORDA grandiflora. Pearl Bush. Dazzling white flowers in numerous terminal racemes. A narrow, upright shrub which prefers a most, fertile soil. H 6-8, S 4, May	.75	7.50
FORSYTHIA intermedia. Hybrid Golden Bell. This variety is a hybrid between F. suspensa fortunei and F. suspensa, and is considered more handsome than either of its parents. Produces great quantities of golden yellow flowers on its slender, arching branches before the foliage appears. H 6-8, S 6, April	.50	5.00
suspensa. Drooping Golden Bell. Excellent for hanging over a wall or trailing down a bank. Best Forsythia for specimen plant. H 6, April.	.50	5.00

FORSYTHIA— suspensa fortunei. Fortune Golden Bell. An upright form of the above species. Some of the branches droop like its parent, thus giving	
us both the upright and the drooping type of bush in one plant. H 6-8, S 5, April\$0.50 \$5.00)
viridissima. Dark Green Golden Bell. A shrub of upright habit with green twigs whereas the twigs of the other Forsythias are yellowish brown. Use this variety for the South, and in protected situations North. H 6-8, S 6, April .50 5.00)
GENISTA tinctoria virgata (G. elata). Dyers Greenweed. A low-spreading shrub, with slen- der green branches and yellow flowers, borne in upright racemes. Fine for the rock-gar-	
dens or for planting in front of tall varieties. H 3-4, S 4, June. Fine pot-plants)
Bears a profusion of pearly white bells which are as showy as the dogwood. Use in background of borders. H 10-15, S 6, May)
*HAMAMELIS virginiana. Witch Hazel. Bears blooms in late Fall and early Winter at a time when all other shrubs are dormant. The heart-shaped leaves give it a decorative appearance but the chief attraction is the bright yellow flowers, which seem to be so out of season.	
H 6-8, S 6	
Hydrangea arborescens grandiflora (Hills of Snow). Quite similar in appearance to a low-growing snow-	
above the ground. Especially adapted for border plantings and if placed in large masses it produces a literal sea of bloom in late Summer and early Fall. The bright green leaves add much to its decorative form. Prefers a moist fertile soil, with full or partial exposure to the sum. It will even make a fairly strong growth in complete shade, but it is not particularly recommended for shade planting. H 3, S 3, 2 to 3 feet. 75c each; \$7.50 per 12.	f i
paniculata grandiflora No more popular plant or shrub has ever been sent	
out than Hydrangea paniculata grandiflora, and we take great pleasure in offering our customers a large stock of splendid vigorous plants at such extremely low prices as will enable them to plant this effective shrub in quantity. People who have only seen this Hydrangea grown singily as specimens, have no conception of how beautiful and effective they are when planted in masses. They are planted in this way at Newport, R. I., which is famous for its fine gardens, and almost as famous for its Hydrangeas. These Hydrangeas can be planted in connection with other shrubbery or in isolated beds, in the same manner as Cannas, Caladiums, or other strong growing bedding plants. They are perfectly hardy, and, once planted, they are a permanent addition to the lawn or garden. When grown in beds or groups, they should be planted about two feet apart, in very rich soil, which should be liberally enriched annually with rotten stable manure; and in the early Spring, before they commence to grow, cut back so as to leave only two or three inches of the new growth of the previous season, and, if extremely large flowers are desired, cut out some of the weaker shoots after growth has commenced. Treated in this manner they will be a solid mass of bloom. They bloom profusely the same season planted. Try them. You will find them more than satisfactory. Prices good until stock is exhausted. Fall or Spring delivery.	t l
18 to 24 inches\$36.00 per 100\$0.50 \$5.00 2 to 3 feet\$48.00 per 100	
paniculata. Panicled Hydrangea. Creamy white flowers are borne in large panicles, 6 to 12 inches long; the sterile flowers as they grow older change to tones of rose and purple. Handsome, dark green foliage. Quite distinct from H. paniculata grandiflora. H 5-6, S 5	

SHRUBS—Continued	Fach	Day 40
HYPERICUM moserianum. Gold Flower. Produces great quantities of golden yellow blooms, 2 inches across. As the growth is dwarf, it is most effective in groups or for	Eacn	Per 12
planting in connection with taller shrubs. H		
prolificum. Shrubby St. John's-Wort. Bright yellow flowers are borne in branching terminal clusters. Narrow, lustrous dark green leaves cover the numerous compact branches. H 2-3,	\$0.50	\$5.00
S 2-3, July ITEA virginica. Virginian Willow. Attractive be- éause of its lustrous green leaves, which change in Autumn to brilliant shades of red, and also because of its fragrant white flowers, which are borne in erect terminal racemes.	.50	5.00
Very free-flowering. Prefers moist soil. H 4-5, S 4 KERRIA japonica (Corchorus japonicus). Globe Flower. Valuable for slender green stems in Winter; bright green foliage in Summer. Single yellow flowers in May. Plant this shrub in front of Cornus alba sibirica. You will like the color contrast of the twigs in Winter. H 4-5,	.60	6.00
japonica argentec-variegata. A dwarf shrub with delicate green foliage edged with white. Bears a profusion of bright yellow flowers. H	.75	7.50
3-4, S 3. 1½ to 2 ft	.75	7.50
LILAC, See Syringa. LIGUSTRUM acuminatum (L. medium). Makes a strong, upright growth and bears quantities of large shining black berries well into the Winter	.50	5.00
ovalifolium. California Privet. Vigorous shrub with glossy, dark green foliage, most commonly used as a hedge plant. Fairly hardy, but in extreme cold weather is sometimes killed to the ground. South of Maryland it retains its foliage throughout the Winter. We do not recommend this for planting north of the Mason and Dixon line.		
1-year	.20	2.00 2.50

leaves, coarsely cut about the edges, turn to		
rich purple and red tones in Autumn. The		
creamy white corymbs of bloom are produced		
in profusion in early Summer, and are followed		
by blue-black berries. H 6-8, S 6. 3 to 4 ft	0.60	\$6.00
lentago. Sheepberry. Bright green leaves and		
fragrant yellowish white flowers. The black,		
oval fruits are produced in abundance. H 8-10,		
S 6	.60	6.00
opulus. European Cranberry Bush. White flow-		
ers are borne in flat cymes in late Spring or		
early Summer. Later scarlet berries appear		
and cling to the branches all Winter. 3 to 4 ft	.75	7.50
opulus sterile. Snowball. Handsome, showy		
flowers are produced in large, globular clus-		
ters, which appear like single blooms. One of		
the most ornamental of the old-time garden		
favorites. It may be safely planted as far		
north as Massachusetts, but in colder situa-		
tions should be protected from strong winds.	2.0	0.00
8-10, S 10	.60	6.00
tomentosum Single - flowered Japanese Snowball. A handsome shrub		
with exceedingly showy flowers and unusually		
beautiful foliage. The flower clusters are		
globe-shaped and usually 3 to 4 inches across;		
they are composed of a multitude of pure white, ster le blooms. The leaves are rather		
felt-like, particularly on the under side. After		
the flowers come decorative red fruits which		
change to black as the season advances. En-		
tirely hardy as far north as Massachusetts, and		
is very highly recommended for specimen		
planting or as part of mass plantings. H 8, S 6.	.75	7.50
tomentosum plenum (V. tomentosum plicatum).		
Japanese Snowball. The double flowers are		
quite large and the clusters of blooms are often		
over 3 inches across. The form of this shrub		
is most picturesque as the branches are borne		
at right angles to the trunk and the dark green		
foliage is crimped in an unusual way. H 8-10,		
	1.00	10.00
WEIGELA. See Diervilla.		
KANTHORRHIZA apiifolia. Yellow-root. Brownish		A
purple flowers are borne in drooping racemes		100
early in the Spring on bright yellow branches.		
As it makes a growth of only 1 to 2 feet,		
it is frequently used as a ground cover, to		
which its brilliant limbs and low growth seem		
particularly adapted. 1½ to 2 ft	.40	4.00

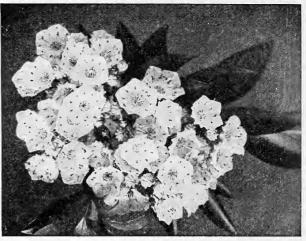

Evergreen Shrubs

Evergreen shrubs should be planted early in the Spring, except from Maryland southward, where they may be planted in September. When planted late in the Fall they do not have a chance to establish themselves before freezing weather arrives.

hinodigiri. Similar to A. amoena save that the flowers are bright crimson. Pot-plants 1.25 13.00 BERBERIS neuberti. Holly-shaped, dark grayish green leaves; spineless branches. Quite evergreen in the South, but only partially so in the North. 1½ to 2 ft		to establish themselves before freezing weather arr	ives.	
green leaves, which change in Winter to a rich bronze. Great quantities of claret-purple flowers cover the plant in Spring for a period of two to three weeks. Pot-plants			Each	Per 12

Rhododendron Maximum.

Kalmia Latifolia-Mountain Laurel.

Each Per 12 Kalmia latifolia. Mountain Laurel, sometimes known as Calico Bush. This is one of the most attractive broad-leaved evergreens because of its splendid glossy green foliage and its masses of showy pink or rose-colored flowers, which appear in profusion early in the Summer. Although this shrub has been admired and widely planted in Europe for a number of years, it is only recently that Ameriican people have appreciated it to a marked degree. The plants prefer a light, loose soil, free from lime, and will grow in either shade or sun, but flower more freely in the sunlight. Mulch the soil well with oak leaves in the Fall and dig them under in the Spring. 1 to 1 1/2 ft. \$1.50 11/2 to 2 ft. 2.50 25.00 2 to 3 ft. specimens 4.00 30.00 3 to 4 ft. 6.00 Prices on larger sizes or carload lots on application.

Rhododendron maximum (Rosebay Rhodendron). Grows naturally from Canada to Georgia. The pinkish white flowers are produced in magnificently large clusters early in the Summer. The oblong, dark green leaves vary from 6 to 10 ins. in length. Besides being perfectly hardy, they will thrive in either sun or shade; therefore Rhododendrons are possibly our most valuable evergreen shrubs for mass plantings in parks, country estates, and even on the small home grounds. In July, when the large heads of white flowers appear, R. maximum is most effective, although the handsome evergreen foliage looks well at all times of the year. Where large quantities are desired, we recommend that collected plants be used as they can be supplied at lower rates than nursery-grown stock. Where carload lots are required, this is easily the most satisfactory way to obtain them, and we should be glad to furnish quotations on collected plants which we can supply in quantity. If smaller lots are desired, we recommend the nursery grown stock, which has received cultivation and will probably endure the pains of transplanting better than the wild sorts. Specimen grade 2 to 3 ft. 4.00 Specimens 3 to 4 ft. 6.00

Ornamental Deciduous Trees

It is possible to transplant trees of any size, from those which are 1 foot tall up to those 1 to 2 feet in diameter. The trees in our list, however, embrace no range like this; we supply them only in sizes which are most suitable for transplanting. If quick results are desired, a medium-sized tree should be planted in an especially prepared hole about 3 feet deep and 5 feet in diameter. If this hole is then filled with good surface soil and mixed with a quarter of its bulk of rotted manure, a medium-sized tree will make an exceedingly fast growth. The cost of such a planting is never greater than the cost of large trees, which almost invariably fail.

Because of the different styles of root systems, some kinds of trees may be safely planted in larger sizes than others. Magnelias, Beeches, Tulip Trees, and Birches, because of their long tap-roots, are difficult to transplant. Medium-sized, or small trees of these special varieties should always be preferred.

While most shade trees can be planted either in Spring or Fall, certain varieties seem to prefer their particular season. We shall be glad to advise our customers concerning this point and other cultural preferences. By long experience we know about what treatment trees require to keep them healthy. Do not hesitate to write to us at any time.

Evergreens

If Evergreens are to grow properly when you transplant them into the home-grounds, they should have been moved several times in the nursery. Then in place of the few coarse roots they would naturally have, there will be a small, compact cluster of fine rootlets, which are easily dug without injury, and which enable the tree to adapt itself readily when it has been moved. The best time for transplanting Evergreens is in the Spring, before the new growth starts. They may be moved all Summer and Fall, toc, but much more care and attention are required than if they are moved early in the year.

The prices quoted in the list below are for small quantities; if large lots of a hundred or over are required, we can make attractive discounts on our prices because of the saving in handling.

tractive discounts on our prices because of the saving in it	
Each	Per 12

Competent Landscape Gardening Advice

Everyone appreciates a beautifully developed landscape and nearly everyone realizes how largely this beautiful picture depends on a carefully studied-out plan on which due attention has been given not only to the arrangement (design), but also to the selection of plants for the different positions in this arrangement (plan). It is because of this fact that the profession of Landscape Architecture has made such a healthy

growth in the past decade.

This office, established now for thirty-five years, takes a pardonable pride in that it was a pioneer in the Landscape Field. As we have pioneered in the Landscape Field so also have we pioneered in the research field, directing our efforts toward the solving of the questions that arise due to the difference in atmospheric conditions in cities, suburbs and in the open country. The atmospheric conditions in cities and suburbs, and this does not apply only to the larger ones, make it essential that extra care be devoted to the selection of planting materials. Dust, smoke and gas fumes not only affect plants in the city but they also influence the growth of some plants in the suburbs of cities. In some large manufacturing centers it is necessary to go out fifteen to eighteen miles before you are in atmosphere that is free from poisonous gases.

Some plants thrive under conditions which will cause in cities an unhealthy condition or the death of another variety. Our list of city resistant plants has been made after observations covering a number of years, comprising all those plants which are hardy in this latitude, the latest introductions from Asia being included. We can confidently assure you that we can provide a long succession of bloom among plants whose growth and foliage is not injured by any offensive properties

that may be in the atmosphere.

In thirty-five years of continuous practice, we have met and successfully solved every possible landscape problem. We can not only solve your problem successfully, but we can in addition, probably save for you the very modest fee we charge for our work, since we will not make the mistakes that the inexperienced often make.
